

# Defence N.R.G

- ✓ Nutrition, resilience, growth
- ✓ Plant health enhancement agent fermented with probiotic microorganisms
- ✓ Strengthens and invigorates plants against pests and diseases
- ✓ Promotes natural plant defences against parasitic and fungal attack
- ✓ Improves the natural resilience of plants

**Defence N.R.G** is based on a unique microbial consortium combined with the added benefit of a specially developed complex of plant extracts that are multifunctional in their purpose. Some extracts promote the growth of beneficial microbes and contribute to necessary micronutrients and trace elements, whilst the fermented extracts of garlic and chilli within **Defence N.R.G** have a range of beneficial impacts, that assist the soil and plants naturally.

## HOW IT WORKS

**Defence N.R.G** is a plant aid and should be used together with **MicroLife**.

For soil applications mix both with **Soil N.R.G** whenever possible, for leaves, mix with **Foliar N.R.G** diluted with water. **Defence N.R.G**'s primary purpose is not to fight these pests directly, but rather increase the plants natural defence mechanism and resistance to be able to fend off parasitic and fungal infestations naturally. The garlic, nettle and chilli have complimentary effects to maximise plant health, making them robust to external influences.

## BASIC INGREDIENTS

Lactic acid and photosynthetic bacteria, yeasts, sugar cane molasses, fermented vinegar, bio-ethanol, water, garlic, nettle leaves and chilli pods.
