

# MicroLife Roots

MicroLife Roots is an advanced formulation engineered for peak agricultural performance, combining the core elements of Soil NRG with the microbial enhancement properties of MicroLife. This product harnesses a diverse fermentation of beneficial microbes, natural phytohormones, humic acids, and essential micronutrients. Together, these components work synergistically to promote extensive root development, vigorous plant growth, and enhanced microbial activity in the soil.

MicroLife Roots extends beyond traditional soil amendments by integrating a diverse array of beneficial bacteria and fungi, enhancing the soil's biological diversity and resilience. This rich microbial environment is essential for effective nutrient cycling and natural suppression of plant pathogens. The inclusion of humic acid not only improves soil structure, water retention, and nutrient availability but also optimizes the soil conditions for robust plant growth. The precisely balanced micronutrients in MicroLife Roots cater to the specific nutritional needs of plants, ensuring they receive all necessary elements for optimal development.

## Optimal Application Rates for Thriving Crops

Tailored to your farming needs different crops have unique needs. MicroLife Roots application rates are designed to cater to the specific requirements of a range of crops from tree crops to broadacre farming, ensuring your soil receives the right care at the right time.

Crop	Rate per Ha	Timing
Tree Crops	30L	Monthly
Vegetables	15-20L	Weekly
Cereal crops	20-30L	Prior to soil turning, or in-furrow, or PSPE
Lucerne	30L	At planting and/or after each cut
Pasture	30L	Applied after grazing and/or before pasture quality declines
Broadacre Cropping	30-60L	At Planting
Forage crops	20-30L	At establishment or early post-emergence
Kiwifruit	20-30L	Monthly via fertigation across growing season

For your specific application requirements, contact your Multikraft specialist. For best results MicroLife Roots should be incorporated into soil by rainfall or irrigation as soon as possible following application. Sizes Available 1,000L shuttle and 20L containers.

### Committed to Sustainability

MicroLife Roots stands at the forefront of **ecological responsibility**, crafted from the ground up with sustainability at its core. Proudly **an allowed input in organic systems**, our product is a testament to our dedication to all-natural ingredients and environmentally conscious farming. We go beyond merely sustaining resources—our goal is to **regenerate and rejuvenate the earth's soils**, using only the purest, chemical-free components. With MicroLife Roots, embrace a greener future where organic integrity and natural potency converge for the well-being of our planet.

### Your Farming, Our Support
